AI Agents · Automation · Chatbots · Web Systems

An AI-native company, built for real work

Cybrum Solutions is an AI-native company based in Karachi, Pakistan, founded in December 2025 by Ahmed Raza. We design, build, and deploy intelligent automation, AI agents, chatbots, and web systems for businesses that want to move faster with less manual work, locally and worldwide. One founder directs an agentic AI workforce, delivering team-level output with a single, directly accountable owner from architecture to deployment.

Our Vision

A near future where a growing business does not hire more hands for repetitive work; it runs on one intelligent system that handles that work end to end. Cybrum exists to be the core element of that shift: the substance that turns scattered tools, tasks, and processes into a single system that runs on its own, for a Karachi shop and a global enterprise alike.

Our Mission

To build AI agents, automation, chatbots, and web systems that run real business workflows in production, not demos that break. Every engagement is honestly scoped, built end to end by one accountable partner, and handed over fully: the client owns the code, the infrastructure, and the results.

What we stand for

01

AI-Native, Not AI-Added

AI is the foundation of how we build, not a feature bolted on at the end.

02

End to End, One Partner

From architecture to deployment, one accountable builder. No juggling multiple vendors.

03

Systems That Actually Run

Automation that works in your real environment, not impressive demos that break in production.

Markets: Pakistan and worldwide

What Cybrum Solutions builds

Three sharp services, with automation at the core. Every engagement starts with a free AI audit and ends with a system you fully own.

Automation & AI Agents

PRIMARY FOCUS

Multi-agent systems and automated pipelines that handle real tasks end to end. Repetitive work, decisions, and processes turned into systems that run on their own: lead handling, order flows, reporting, back-office operations.

Custom Chatbots & Assistants

Domain-specific assistants with memory, tools, and real knowledge of your business, on your website or on WhatsApp, in English and Urdu. Not generic wrappers: assistants that answer correctly, capture leads, and hand off to a human when needed.

Web Development

Fast, modern websites and web applications built on Next.js. Clean, conversion-focused, and ready to scale, from company sites to full management systems with databases, dashboards, and payments.

How we work

01

Understand

We map your actual workflow: what takes time, what breaks, what repeats. This is the free AI audit.

02

Architect

A clear system design before any code. Tools, data flow, and structure defined upfront.

03

Build & Deploy

The system is built, tested, and deployed into your real environment, with working progress visible during the build.

04

Refine

Real usage data drives improvements. The system gets sharper over time.

BUILT WITH

• Claude API • LangGraph • CrewAI • n8n • Next.js • Python

Systems we have built and shipped

Real systems, built end to end and deployed to run, across AI agents, automation, and the web.

MANAGEMENT PLATFORM

Translation Management System

One real-time dashboard running Quranic translation across 25+ languages with meeting scheduling, plus an 8-stage English production pipeline. In daily use at Dawat-e-Islami.

Next.js

TypeScript

Supabase

CLIENT PORTAL

Lodhi Cooperative Housing Society

Secure document portal for a 360-plot housing society: each client signs in to access only their own legal documents, with admin verification and private storage.

Next.js

Prisma

PostgreSQL

SHOP MANAGEMENT SYSTEM

Hafeez Communication

Full management panel for a mobile shop: stock, fast sales with credit tracking, printable invoices, and JazzCash and EasyPaisa operations tied to one live cash ledger.

Next.js

Prisma

PostgreSQL

AI AGENT

LinkedIn Autonomous Agent

Autonomous agent that reacts and comments on LinkedIn posts using an LLM, with built-in relevance filtering, running unattended.

Playwright

Python

LLM

FULL-STACK WEB APP

AR Bank Management System

A full banking simulator: instant transfers, live transaction history, and an admin panel tracking every account and rupee, backed by a real Postgres database.

Next.js

Prisma

PostgreSQL

FREE RESOURCE

Skills Library

A growing public library of downloadable AI skills: WhatsApp support bot, lead qualifier, invoice extractor, Excel formula generator, and more, free at cybrumsolutions.dev/skills.

Open access

"We needed one system to coordinate Quran translation across dozens of languages. Ahmed built exactly that, and it has run reliably ever since."

Director, Translation Department · Dawat-e-Islami

The founder behind **Cybrum**

Ahmed Raza is an AI Solutions Expert and the Founder and CEO of Cybrum Solutions. He operates as the orchestrator of an agentic AI workforce: one accountable builder directing AI agents that plan, build, test, and ship, delivering team-level output on every project.

Before founding Cybrum, Ahmed spent more than 8 years as an Islamic scholar and Assistant Shariah Advisor. He leads translation at Dawat-e-Islami, coordinating Quran translation across 33 languages, work that demands precision, coordination at scale, and systems that cannot afford to fail. That same discipline now drives how he engineers AI systems.

He bridges deep scholarship with modern AI engineering and works in Urdu, Arabic, and English with clients in Pakistan and worldwide.

Execution Over Words.

33

Languages coordinated in a single AI-managed translation system

8+ yrs

Domain expertise bridging deep research and AI engineering

1

Accountable partner from architecture to deployment, no vendor juggling

Why "Cybrum"?

Cyber + um = Cybrum

The name Cybrum is built from "Cyber" joined with the suffix "-um", the same ending found in words like quantum, spectrum, and forum. That suffix turns a word into a single, foundational element. Cybrum names exactly that: the core building block of the intelligent digital world.

For your business, Cybrum Solutions is that element. The substance that turns scattered tools, tasks, and processes into one intelligent system that runs on its own.

Cybrum Solutions: one element, every solution.

• START HERE

Book a free AI audit

Tell us about the workflow you want automated or the AI system you want built. You get a clear, honest answer on what is worth building and how, usually within 24 hours.

Your free AI audit includes

- ✓ A map of your current workflow: what takes time, what repeats, what breaks
- ✓ A shortlist of automation and AI agent opportunities, ranked by impact
- ✓ An honest build-or-not recommendation with rough cost and timeline. If automation is not the right answer for your case, the audit says so.
